

Dear Hiring Manager,

I am excited to apply for the Frontend Developer position at your organization.

With nearly 7 years of experience in frontend development, I have built and maintained enterprise web applications using Angular, React, TypeScript, JavaScript, HTML, CSS, SCSS, RxJS, and REST APIs. Throughout my career, I have developed scalable, responsive, and user-friendly applications while collaborating closely with cross-functional teams in Agile Scrum environments.

In my current role, I have contributed to an enterprise Human Capital Management (HCM) platform, developing modules such as Employee Onboarding, Employee Management, Leave Management, Time & Attendance, Dashboards, Reports, and Asset Management. My responsibilities include building reusable Angular components, integrating REST APIs, implementing Reactive Forms, optimizing application performance, and ensuring code quality through clean architecture and best practices.

I continuously invest in learning new technologies. Recently, I expanded my skills in Node.js, Express.js, and MySQL to strengthen my full-stack knowledge. I also use AI-powered development tools such as Claude, Cursor AI and GitHub Copilot to improve productivity, accelerate development, and enhance code quality while carefully reviewing and validating every AI-generated suggestion.

I am passionate about building high-quality software, solving challenging problems, and continuously improving as an engineer. I believe my technical expertise, enterprise application experience, and commitment to learning would allow me to make a meaningful contribution to your team.

Thank you for considering my application. I would welcome the opportunity to discuss how my skills and experience align with your requirements.

Sincerely,

Ch. Kanthamani
